

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A multi-dimensional robotic web browser (120, 122), comprising:
means for downloading high level program instructions transmitted over an electronic network (150), wherein said high level program instructions include synchronized multimedia integration language; and means for rendering said downloaded high level program instructions transmitted over said electronic network (150), such that when at least a portion of said downloaded instructions (115) are rendered, direct said multi-dimensional robotic web browser (120, 122) is directed to one of move in three dimensions, play back an audio stream, or and play back a video stream.

2. (Currently Amended) The multi-dimensional robotic web

browser ~~(120, 122)~~ of Claim 1, further comprising:

means for storing ~~(115, 118)~~ said downloaded high level
program instructions;

means for retrieving said downloaded high level program
instructions from said storing means ~~(115, 118)~~, such that when at
least a portion-part of said stored instructions are rendered by
said multi-dimensional robotic web browser ~~(120, 122)~~, direct,
said multi-dimensional robotic web browser ~~(120, 122)~~ is directed
to one-of move in three-dimensions, playback an audio-stream
content, and playback a video stream, content.

3. (Currently Amended) The multi-dimensional robotic web

browser ~~(120, 122)~~ of Claim 1, further comprising:

means for rendering pre-stored high level program instructions
pre-stored on one or more computer-readable media coupled to or
integrated with said robotic web browser ~~(120, 122)~~, such that when
at least a portion-part of said local-pre-stored high level program
instructions are rendered, said robotic web browser ~~(120, 122)~~ is
directed to move in three dimensions, play back an audio-stream

content, or and play back a video-stream content.

4. (Currently Amended) The multi-dimensional robotic web browser ~~(120, 122)~~—of Claim 1, wherein said high level program instructions comprise computer-executable code written in a high level markup language.

5. (Currently Amended) The multi-dimensional robotic web browser ~~(120, 122)~~—of Claim 1, further comprising:
means for processing data in two-dimensions in accordance with current and future network browser standards.

6. (Currently Amended) The multi-dimensional robotic web browser ~~(120, 122)~~—of Claim 1, wherein said electronic network is the Internet.

7. (Currently Amended) The multi-dimensional robotic web browser ~~(120, 122)~~—of Claim 6, wherein said high level program instructions are downloaded in accordance with a recognized Internet transmission protocol.

8. (Currently Amended) The multi-dimensional robotic web browser ~~(120, 122)~~ of Claim 1, wherein said electronic network is one ~~or~~or ~~of~~ a wireless network or a wired network.

9. (Currently Amended) A system for executing high level language instructions, downloaded over an electronic network ~~(150)~~, said instructions for processing in a multi-dimensional robotic web browser ~~(120, 122)~~, the system comprising:

at least one remote computer ~~(110)~~ for generating said high level language instructions;

said electronic network ~~(150)~~ coupling said at least one remote computer ~~(110)~~ with said multi-dimensional robotic web browser ~~(120, 122)~~; and

said multi-dimensional robotic web browser ~~(120, 122)~~, comprising:

means for receiving ~~(125)~~ said high level language instructions downloaded over said electronic network ~~(150)~~; and

means for rendering said downloaded high level language instructions, such that when at least a portion of said downloaded

high level language instructions are rendered by said multi-dimensional robotic web browser-(120, 122), direct, said multi-dimensional robotic web browser (120, 122) is directed to one of move in three-dimensions, playback an audio stream, and playback a video stream; stream.

10. (Currently Amended) The system of Claim 9, wherein said multi-dimensional robotic web browser (120, 122) further comprises: means for storing said high level language instructions; and means for retrieving said stored high level language instructions from said storing means, such that when at least a portion of said stored high level instructions are rendered by said multi-dimensional robotic web browser-(120, 122), direct, said multi-dimensional robotic web browser (120, 122) is directed to one of move in three-dimensions, playback an audio stream, and playback a video stream; stream.

11. (Currently Amended) The system of Claim 9, wherein said electronic network (150) is the Internet.

12. (Currently Amended) The system of Claim 9, wherein said

electronic network (150) is one of a wired or wireless network.

13. (New) The multi-dimensional robotic web browser of claim 1, wherein the multi-dimensional robotic web browser is configured to blink twice, smile, and bow.

14. (New) The multi-dimensional robotic web browser of claim 13, wherein the multi-dimensional robotic web browser is further configured to perform a country dance and shake hands.

15. (New) The multi-dimensional robotic web browser of claim 1, wherein the multi-dimensional robotic web browser is synchronized to move in accordance with a content being rendered.

16. (New) The multi-dimensional robotic web browser of claim 15, wherein the multi-dimensional robotic web browser is configured to produce behaviors and interactions based on a story line of the content.

17. (New) The multi-dimensional robotic web browser of claim 1, wherein the multi-dimensional robotic web browser is configured to produce behaviors and interactions based on user preferences regarding rendering of data including pace of delivery, loudness of the rendering, and movements.

18. (New) The multi-dimensional robotic web browser of claim 1, wherein the multi-dimensional robotic web browser is configured to produce behaviors and interactions based on user preferences.

19. (New) The system of claim 9, wherein the multi-dimensional robotic web browser is synchronized to move in accordance with a content being rendered.

20. (New) The system of claim 9, wherein the multi-dimensional robotic web browser is configured to produce behaviors and interactions based on user preferences.
